R% : Reflectance

T n-h : Normal-hemispherical light transmission%

WHY CHOOSE ANTIVIRAL FABRIC?

COVID-19 has changed the way we approach safety in our daily lives.

Viruses can remain on untreated fabrics and surfaces for over 2 days. This increases the risk of viruses spreading and putting people, patients and customers at risk.

Kaydee Antiviral fabric has a special coating that is tested and proven to eliminate 99% viruses and bacteria within an hour.

Using the Kaydee Antiviral fabric in hospitals and care homes can help increase safety and protection.

Antiviral fabric is also suited to busy reception areas, restaurants and office environments where there is a constant flow of people and regular cleaning of surfaces is difficult.

Antiviral range is tested to ISO 21702 & ASTM E180.

I would like to thank the Kaydee team for their hard work and helping us achieve PC despite a extremely difficult programme
